

The Educational Testing Service (ETS) Major Field Test (MFT) is administered to students in their final semester in ten different subject areas. Each year OAIR provides the appropriate division chair with a ten year graphical representation of the average score relative to the national norming data. Division chairs use this data to make decisions about their program curricula to address deficiencies that might arise.

Data Summary: The Major Field Test (MFT) assessment indicator data is helpful in identifying specific discipline subtopics that are relatively weak. Instances where this data has been used for curricula improvement are documented in the Strategic Plan, Volume II and in the Assessment Flow Diagrams. While the comparison of the MBU MFT results with the national norm results may seem low, often in the 30th percentile range, and analysis of the institutions which take the MFT in each of the ten subject areas shows that a school with an average freshman ACT score of 21, like MBU, would be at about the 30th percentile.
