

MEES School Librarian Candidate Summative Rubric Scoring Protocol

- For any descriptor score of 0 within a standard, the candidate must demonstrate that the standard was met with at least one additional artifact.
- For summative scores of 1 – 3 within a standard, the candidate will receive the majority score. For example, if there are two descriptors that falls within level 2, and one descriptor falls within level 3, a score of 2 will be assigned.
- To earn a summative score of 4 within a standard, the candidate must earn all level 3 descriptors plus at least one level 4 descriptor.
- If the descriptor scores are split evenly between two levels, the lower score will be assigned. For example, if there is one descriptor that falls within level 1 and one descriptor falls within level 3, a score of 1 will be assigned. Additionally, if there are two descriptors that fall within level 2, and two descriptors that fall within level 3, a score of 2 will be assigned.
- If the descriptor scores are spread evenly between multiple levels, then the median score will be assigned. For example, if there is one descriptor that falls within level 1, one descriptor falls within level 2, and one descriptor falls within level 3, a score of 2 will be assigned.
- For some standards, a discussion rather than observation may be necessary.
- All standards must be scored on the Summative Evaluation.
